DRILL CONTROLLER — WELFARE AND SELF-RELIANCE SPECIALIST (EMERGENCY COMMUNICATIONS) OR EMERGENCY RESPONSE DIRECTOR (ERD)

CARD 5 · FRONT · SIDE 1 OF 2

Running a Drill with the Church of Jesus Christ EMCOMM Simulator

Share this card

BEFORE THE ROOM FILLS

1. Start the EOC (Emergency Operations Center) server and set it up
   Setup tab: EOC level, name and roster (the playing wards). **Reset for the session** (step 4) opens the drill event. Wall display on the TV.
2. Start the simulator on the EOC laptop
   Double-click **Church of Jesus Christ EMCOMM Simulator** on the Desktop (installer role 3), then open `http://<this laptop>:8090`. The organization pack and map data stay on this laptop.
3. Setup tab: pack → privacy → what this simulator plays → EOC → scenario → speed
   Pseudonymized (invented names) unless the Stake President agreed to real contacts. Add missing callings under the pack. Plays **this Stake EOC**, **a Satellite EOC** or **a Council / Area EOC**. Speed 2× for a two-hour room, 1× for four hours.
4. Session tab: rehearse, then **Reset for the session**
   Reset opens a fresh drill event; the EOC screens show *waiting for the trainer's GO*. Print the Roles tab.

DURING THE RUN

5. Hand each newcomer **card 9** (Your First Drill). Give the instructions, then **GO** on the Session tab.
   Hand out each card as it comes due
   Reports reach the EOC by the path the PACE (Primary, Alternate, Contingency, Emergency) level selects. Net cards to the HAM (amateur radio) operators, prompts to the role named, paper to a runner. After a restart: **Resume** on the Session tab.
6. PACE changes follow the scenario's triggers
   The specialist recommends, the Stake President decides, the ERD or the specialist announces it on the net; then you set the level on the Run tab and it reaches the EOC header. Never change it for them.
7. Watch the scoreboard; at the end open the after-action report
   Run tab: needs met, overdue, score. Needs tab: **Waive** what the room is not playing. Hot wash tab (the after-drill review): mark each line, then **After-action report**. Results on any phone: `http://<laptop>:8090/results`.
8. **Debrief for the room**
   Session tab step 5 → projector slides (← → move, F full screen): what went well, the score, one thing per role, the date of the next drill. Pick the date before people leave.

> **Several EOC laptops: one simulator each,** same scenario and seed. Operators press **I am ready** on the drill bar (remote sites say so by voice). On every laptop's Session tab, step 3: enter the agreed time in **or start every laptop at**, then **Schedule**. The clocks start together.

Turn over → Card 5, side 2: What the Simulator Sends, Who Plays, What the Hot Wash Reads

DRILL CONTROLLER — WELFARE AND SELF-RELIANCE SPECIALIST (EMERGENCY COMMUNICATIONS) OR ERD

CARD 5 · BACK · SIDE 2 OF 2

What the Simulator Sends, Who Plays, What the Hot Wash Reads

INJECTS — WHAT YOU DO WITH EACH

Report — sent to the EOC by the level in force: **P / A** phone upload · **C** a Winlink `.mime` into the EOC's simulated Winlink inbox; the EOC files it by itself (a paper card if the EOC has no Winlink) · **E** paper card for a runner to carry

Note — lands in the EOC notes log prefixed SIM: (roads, weather, the county)

Net card — hand it to the ward's HAM to read on the stake net

Prompt — hand it to the role named: a recommendation, a decision, a SITREP (situation report) that is due

Work item — lands on the EOC's Work Items list (mission office, county, welfare line, Stake President); the EOC owns it, acts, records the decision

Consequence — fires when a need is met (the resolution) or overdue (the caller comes back). Reply — the welfare line closes an item set UP, DONE with the decision

Role players: Stake President · Welfare and Self-Reliance Specialist · Emergency Response Director (ERD) · a bishop per playing ward · Team Leaders · ward HAM operators · Stake EOC operators · a Satellite EOC operator · the welfare line (the Welfare and Self-Reliance Managers) · the Area Seventy (email only) · a Council / Area EOC if the drill opens one · you, the controller.

The scoreboard reads the Work Items list: every need owned in time (HIGH within 10 minutes), closed or set UP in time, leadership questions answered as a recorded decision, paper and net reports typed in within 25 minutes with the numbers as on the card; SITREP #1 by the time the scenario sets; nothing HIGH left without an owner. Tell the EOC operators on day one: **own it, move it, write the decision in.**

Privacy: pseudonymized runs still show real unit and building names. For an issue or screenshot, use the invented Juniper Plains Area or "Report as text, units redacted". A real-contacts run never leaves the room. The mode is stamped on every run and export.

Tabletop without the room: one controller, one EOC operator, 10× speed, the invented Juniper Plains Area: forty minutes shows every path and the hot wash.
